

RX Rustseal

RX Rustseal is a high-performance molecular resin system containing reinforced glass flakes combined with aluminium leaf, to produce a tremendous water barrier against rust. Rustseal has excellent flexibility and chemical resistance and can be applied directly to rusty surfaces after simple wire brushing. Specially selected resins penetrate any existing rust to exclude air, preventing rusting and providing a superb protection system against weather and industrial pollution.

Features and Benefits

- Stops rust and prevents it's growth.
- Can be applied directly to rusty surfaces.
- One coat system.
- Excellent flexibility.
- Superb chemical resistance.
- Glass flake protection.
- Aluminium leaf protection.
- Complete barrier against water and air.
